

Find all the values of the six trigonometric functions of the angle θ .

$$\begin{aligned} \sin \theta &= 3/4 & \csc \theta &= 4/3 \\ \cos \theta &= \sqrt{7}/4 & \sec \theta &= 4\sqrt{7}/7 \\ \tan \theta &= 3\sqrt{7}/7 & \cot \theta &= 7/3 \end{aligned}$$

Find the measure of the indicated angle to the nearest degree.

$$\tan x = 14/29$$

$$x = \tan^{-1}(14/29)$$

$$x \approx 26^\circ$$

Solve the right triangle. Round to the nearest tenth.

$$\begin{aligned} p &= & \angle P &= \\ q &= & \angle Q &= \\ r &= & \angle R &= \end{aligned}$$

$$18^2 + 11^2 = b^2$$

$$\sin C = 18/21.1$$

$$\begin{aligned} a &= 11 & \angle A &= 31.5^\circ \\ b &= 21.1 & \angle B &= 90^\circ \\ c &= 18 & \angle C &= 58.5^\circ \end{aligned}$$

$$\tan 52^\circ = \frac{x}{8.5}$$

$$\cos 52^\circ = \frac{8.5}{z}$$

$$x = 10.9 \quad \angle X = 52^\circ$$

$$y = 8.5 \quad \angle Y = 38^\circ$$

$$z = 13.8 \quad \angle Z = 90^\circ$$

$$k = \quad \angle K =$$

$$l = \quad \angle L =$$

$$m = \quad \angle M =$$

11. You are hiking up a mountain peak. You begin hiking at a trailhead. The trail ends near the summit at 14,255 feet. The horizontal distance between these two points is about 17,625 feet. Estimate the angle of elevation from the trailhead to the summit. Round your answer to the nearest tenth.

$$\tan \theta = \frac{14255}{17625}$$

$$\theta = \tan^{-1} \left(\frac{14255}{17625} \right)$$

$$\theta \approx 39^\circ$$

13. During its approach to Earth, the space shuttle's glide angle changes. When the space shuttle is 5 miles from the runway, its glide angle is about 19 degrees. Find the shuttle's altitude at this point in its descent. Round your answer to the nearest tenth.
